

# Anaideia.

A cutting-edge approach to crypto investing.

Key assumption:

The Ethereum ecosystem is the most compelling story in crypto.

Thus, we like to draw our universe of investable narratives on a polar coordinate system with Ethereum as the origin and these two dimensions:

$r$  = Speculation

The additional speculation beyond the key assumption.

$\alpha$  = Scope / Use-case

Example:

125° - 270° : Tokenization

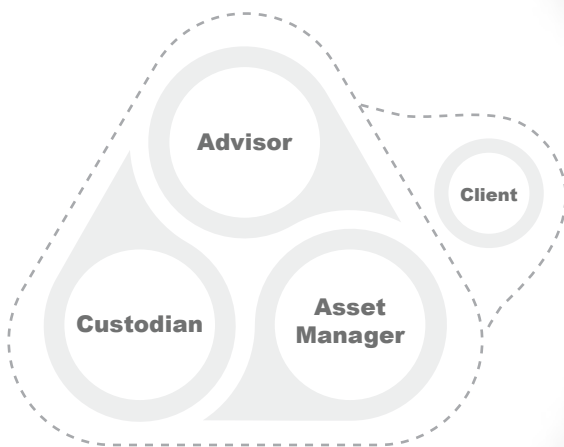

0° - 360° : Turing Completeness

We focus on areas of minimal speculation that cover a wide scope of narratives.

We call these protocols **Ethereum keystones**.

Onchain and Offchain insights combined with AI are at the core of our decision making.

## Execution & Reporting

Our API integrations allows for direct execution and simultaneous reporting within our organisation and to our stakeholders.

## Investment Thesis

Explanatory Video - 10m

## Strategy

### Flash Crash Trading

We anticipate a year characterized by sharp corrections within an ascending market cycle.

We use our AI tools to detect overheated market condition, while allocating with layered orders at critical retracement levels during deep market downturns.

It's difficult to tell in advance when this market regime will end.

Macro trends need to be reassessed periodically.
